Mahrs Aslam

Vancouver, BC · +1 (587) 501-6084 · mahrs.aslam@gmail.com · mahrsbar.github.io/portfolio · linkedin.com/in/mahrs-aslam

UX engineer with 7 years of building software, trained in psychology before computer science. I start with user research (session replays, support data, analyst interviews) to find out how people actually work, shape what the product should become, and build it in React and TypeScript, down to the design system it runs on.

EXPERIENCE

UX Engineer II · GeoComply — Jan 2025 – Present

- Led discovery across a fraud-investigation suite (analyst interviews, journey map, personas) and designed the unified user page that replaced a 4-tool workflow, shipped as the first pillar of a multi-year back-office strategy.
- Designed and built solo an AI investigation assistant (React, Cloudflare Workers, Claude API) that turns analysts' questions into editable filters; now a major prospect's reference demo, with 2 patterns on the product roadmap.
- Turned session replays, support tickets and shadowing into roadmap priorities: 6 friction themes behind an access-console revamp now in testing, and a severity-ranked audit of 21 map failures that set engineering's fix order.
- Led the design system from Figma-only to a React, TypeScript and MUI library used by 4 products (66 token-themed components); built 4 Figma plugins and an AI-agent pipeline that cut design-to-code from days to about 10 minutes.

Front-end Developer · OneComply (GeoComply) — Mar 2023 – Jan 2025

- Redesigned the core licence application from an 11-step guide page into a 6-step guided flow with visible progress and review errors that link to the fix; reframed the product around licences, so submitting now creates the licence record.
- Traced a backlog of per-client column requests to one missing setting, redesigned the task manager around client-defined custom fields and statuses, then built the beta fixes and an analytics-tracked onboarding tour in React.
- Phased the platform redesign so each part shipped on its own, starting with navigation cut from 30 links to 3 areas; ran discovery with a supplier's compliance team to redesign a regulatory form for complete first submissions.

Lead Front-end Developer · Remnant Labs — Mar 2022 – Jan 2023

- Led the studio's website redesign end to end, from audience research, brand voice and wireframes to the Vue, Firebase and GSAP front end that shipped; web traffic rose 125% after launch.
- Cut navigation to a few clear choices, added a games page spanning every title, built reusable Vue components backed by Firebase auth and real-time data, and prototyped 3 animated character-card components.

Full-stack Developer and Technical Lead · ProgramEquity (formerly ProgramEarth) — Jul 2021 – Mar 2022

- Led a distributed volunteer team building Amplify, an open-source civic-engagement platform for advocacy nonprofits; one-click GitHub Codespaces onboarding grew the contributor base 50%.
- Built the Vue/Vuex front end and Node back end (Google Civic API representative lookup, Auth0 sign-in), and mentored junior developers through pairing and code review.

Front-end, then Full-stack Developer · We Know Training — Jul 2019 – Jun 2021

- Built accessibility-first, responsive eLearning courses for 10+ clients with instructional designers (Adapt Framework, JavaScript, LESS); learner engagement rose 30% and course completion 40%.
- Progressed to full stack on the company's learning platform, prioritising requirements with product managers and executives, and shipping AngularJS components, GraphQL queries and test-driven Rails APIs.

SKILLS

Research: User interviews, shadowing, session replays, support-ticket analysis, journey maps, personas, analytics

Front-end: TypeScript, React, MUI, Vue, HTML/CSS, Storybook, Playwright, accessibility (WCAG), SwiftUI

Design systems: Figma (variables, plugin API, Make), design tokens, MUI theming, component architecture

AI: Claude API (Anthropic SDK), LLM prototyping, prompt design, MCP, Claude Code, Cursor

Platform: Cloudflare Workers, Node, Rails, GraphQL, PostgreSQL, GitHub Actions

EDUCATION

B.Sc. Computer Science · University of Regina — 2017 – 2019

B.A. Psychology · University of Alberta — 2013 – 2016
