UX engineer with a psychology degree and a computer science degree. I lead design-system work, build Figma and front-end tooling, and use AI to ship products faster without lowering the bar.

EXPERIENCE

UX Engineer II · GeoComply — Jan 2025 – Present

- **Design system:** took a Figma-only design system to a production React/MUI package used by 4 products, with 40+ reusable components and 66 MUI components themed from design tokens; design changes now reach code in about 10 minutes instead of a full day.
- **Figma tooling:** built 4 TypeScript plugins that automate design-system upkeep, relinking 1,516 properties to variables in a single run and exporting components to code with zero manual edits.
- **AI product prototype:** designed and built solo a fraud-investigation demo (React, Cloudflare Workers, Claude API) that turns analysts' questions into editable filters. It became the reference demo for a major prospect and the developer portal's live demo, and put 2 patterns on the product roadmap.
- **Research to roadmap:** combined 3 months of session replays, 6 months of support history and a week shadowing support into 6 friction themes for an access console; they became a revamp epic, now in testing, and I shipped the first front-end fixes.
- **Unified user page:** designed the view that replaced analysts switching between 4 tools, the first shipped piece of a multi-year plan to unify the back office.

Front-end Developer · OneComply (GeoComply) — Mar 2023 – Jan 2025

- Redesigned the core licence application, one sprawling disclosure form, into a 6-step guided flow with progress tracking, review warnings that jump straight to the fix, and document reuse; submitting now creates the pending licence record automatically.
- Ended a backlog of per-client column requests by rebuilding the task manager around client-defined fields and statuses; shipped the beta fixes and an analytics-tracked guided tour in React.
- Ran discovery with a supplier's compliance team to redesign a regulatory shipping-notification form around complete first-time submissions: jurisdiction first, saved drafts, catalogue prefill and compatibility warnings.
- Designed about 70 tickets and 3 shipped flows over two years, building many of them, including KPI dashboards, onboarding patterns and regulator portal pages, all checked against WCAG.

Lead Front-end Developer · Remnant Labs — Mar 2022 – Jan 2023

- Led the website redesign from audience research and wireframes to the Vue and Firebase front end that shipped; web traffic rose 125% after launch.

Full-stack Developer and Technical Lead · ProgramEquity (formerly ProgramEarth) — Jul 2021 – Mar 2022

- Led development of Amplify, an open-source civic-engagement platform (Vue, Node, Google Civic API, Auth0), and mentored junior developers; contributors grew 50%.

Front-end, then Full-stack Developer · We Know Training — Jul 2019 – Jun 2021

- Built eLearning courses for 10+ clients and a Rails/GraphQL learning platform; course engagement rose 30% and completion 40%.

SKILLS

Front-end: TypeScript, React, MUI, Vue, Swift/SwiftUI, Storybook, Style Dictionary, Playwright, accessibility

Design and research: Figma (variables, plugin API, Make), prototyping, session replays, journey maps, shadowing

AI: Claude Code, Cursor, Anthropic SDK, MCP

Platform: Cloudflare Workers, Node, Rails, Django, PostgreSQL, GitHub Actions

EDUCATION

B.Sc. Computer Science · University of Regina — 2017 – 2019

B.A. Psychology · University of Alberta — 2013 – 2016
